## ASSOCIATED CHARITIES AIDS 6 YOUNG MEN

Six able-bodied young men have applied for assistance at the Associated Charities during the past month according to Mrs. A. C. Jordan, who is in charge of the work. During the same period \$258.50 has been paid out for food, milk, rent and sundries.

Three of the men were whites, two Scotch and one American. The Scotchmen were sailors off the Ma-rama who were accidentally left behind when the steamer sailed, while the American was a luna who had lost his position. The sailors were berthed on the next Canadian-Australian liner while the American was turned over to the Salvation Army.

A Hawaiian who was young and able-bodied applied for transportation to Kauai and was told to go and work for it, while the sixth man, a Filipino, was turned over to the Planters' Association.

One man, a sailor from the Edward Sewall who was subject to epileptic fits, was sent back to the Coast, where he has relatives. During the month, Mrs. Jordan paid out for food \$135, milk \$53.50, rent \$18, transportation \$22.

## BATS TO FIGHT MOSQUITO PESTS

Texas Man Has New Plan to Kill Pests—Bat Roosts

There is a man in Texas who has found out a new way to fight the mosquito. His name is Dr. Charles Campbell. He is official bacteriologist of the city of San Antonio. His idea says the writer in the Technical World Magazine, is to employ bats as mosquito fighters. The neighborhood of San Antonio is especially plagued with mosquitoes—malaria is more or less rife in the vicinity—and for a long time past the inhabitants of the municipality and its suburbs have eagerly sought to find a solution of the problem. Much benefit has been obtained by keeping minnows in cisterns and ponds—these small fishes being greedy devourers of mosquito larvae—but such measures have not altogether met requirements.

Bats as is well known, are insect eaters, and are particularly fond of mosquitoes. In the twilight, when they rove abroad, they devour immense numbers of the pestiferous insects—their manner being to dash back and forth through a swarm and gobble the victims up by wholesale.

In view of which fact, it occurred to Dr. Campbell that it might be a good idea to establish in and about San Antonio a number of "bat roosts," as he calls them—that is to say, structures so contrived as to invite bats for sleeping purposes. He has already put up two of them, and proposes to erect others, those already in operation having proved highly successful.

## THIEF RETURNS WATCH STOLEN TWO YEARS AGO

Conscience stricken after two years' possession, an unknown person who stole a gold watch from the desk of William Rosa in March, 1910, returned the timepiece by mail to the proper owner a few days ago. Rosa, at that time a sophomore at McKinley High School, and at present assistant Federal Court clerk, says that although the watch was new, a recent gift from his mother, it has been cleaned and is in better condition now than when he lost it.

The identity of the thief is unknown. That the act was originally intended as a joke which became serious when the thief became frightened at his own temerity, is the belief of Rosa.

This is strengthened by the legend in a scrawling script on the small plain box that carried the watch back to Rosa, which reads, "Returning. Did not mean to take it."

Rosa, who graduated from the High School this spring, had given up all hope of recovering the timepiece. The principal and the police were notified at the time, but no clue to the identity of the person who took it was obtained.

## APE MEN AND WOMEN ROAMED IN WISCONSIN AGES AGO, BONES PROVE

Skeletons Uncovered; Small Heads; Jawbones of Simians—Buried Deep in Clay

Madison, Wis., June 15.—Examination of skeletons discovered in mounds at Lake Delevan and Lake Lawfarm was declared today to indicate that a hitherto unknown race of men inhabited Southern Wisconsin ages ago. Information of the characteristics of the skeletons was brought to Madison by Attorney Marjorie Morrisey of Delevan and Charles E. Brown, curator of the State Historical Museum, will make a further investigation.

The heads are much smaller than those of any people which inhabit America today. From directly over the eye sockets, however, the head slopes straight back and the nasal bones protrude far above the cheek bones. The jawbones are long and pointed, resembling those of the ape. Skeletons supposed to be those of women had smaller heads, which were similar in facial characteristics.

The skeletons are embedded in charcoal from four to ten feet deep

and covered over with layers of baked clay, designed, it is believed to shed water from the sepulchre.
